

Data Engineering with Apache Spark

Markus Dale, medale@asymmetrik.com

May 2019

Intro, Slides And Code

- Slides: <https://github.com/medale/prez-spark-dataengineering/blob/master/presentation/SparkDataEngineering.pdf>
- Spark Data Engineering Code Examples:
<https://github.com/medale/prez-spark-dataengineering>

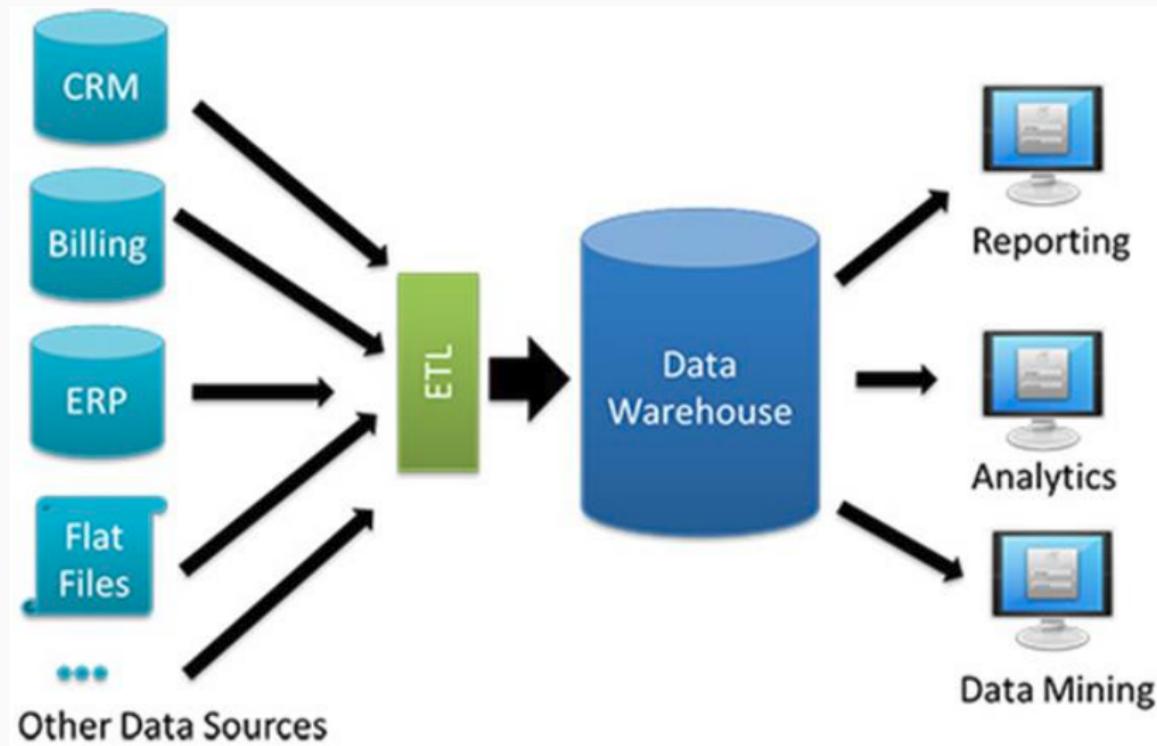

Data Science Mission

- ID malicious GitHub Pull Requests?
- Source: <https://www.gharchive.org/>

Data Engineering Mission

- <https://www.gharchive.org/>
 - 2/12/2011-12/31/2014 Timeline API (now deprecated).
 - From 1/1/2015 to now Events API.
 - Since 2015: About 20-40MB/hour * 37900 hours ~1TB
- Store: Fast, time-based access when specifying yyyy, mm, dd, hh (or prefix combination)
- Side effect: Learn more about Spark batch processing

Anatomy of a Spark Application

Source: Apache Spark website

Hello, Spark World!

```
import org.apache.spark.sql.SparkSession

object HelloSparkWorld {

    val RecordsUrl = "file:///datasets/github/data"

    def process(spark: SparkSession): (Long, Long) = {
        val records = spark.read.json(RecordsUrl)
        val totalEventCount = records.count()
        val prs = records.where(records("type") === "PullRequestEvent")
        val pullRequestEventCount = prs.count()
        (totalEventCount, pullRequestEventCount)
    }

    def main(args: Array[String]): Unit = {
        val spark = SparkSession.builder().appName("HelloSparkWorld").getOrCreate()
        val (total, prs) = process(spark)
        println(s"Total events: ${total}, pr events: ${prs}.")
        spark.stop()
    }
}
```

SparkSession - Gateway to the Cluster

```
def main(args: Array[String]): Unit = {  
    val spark = SparkSession.builder().  
        appName("HelloSparkWorld").  
        getOrCreate()  
    ...  
    spark.stop()  
}
```

API - SparkSession Object

SparkSession

org.apache.spark.sql

SparkSession

Related Docs: [class Sp](#)

object **SparkSession** extends [Logging](#) with [Serializable](#)

Annotations @Stable()
Source [SparkSession.scala](#)

► Linear Supertypes

Ordering [Alphabetic](#) By Inheritance

Inherited [SparkSession](#) [Serializable](#) [Serializable](#) [Logging](#) [AnyRef](#) [Any](#)
[Hide All](#) [Show All](#)

Visibility [Public](#) [All](#)

Type Members

► class **Builder** extends [Logging](#)
Builder for [SparkSession](#).

Value Members

► def **active**: [SparkSession](#)
Returns the currently active SparkSession, otherwise the default one.

► def **builder()**: [Builder](#)
Creates a [SparkSession.Builder](#) for constructing a [SparkSession](#).

API - SparkSession Class

```
//spark.read - DataFrameReader  
val records: DataFrame = spark.read.json(RecordsUrl)
```

spark.read: DataFrameReader - Input

- CSV
- json
- jdbc
- parquet
- text - DataFrame with “value” column
- textFile - Dataset[String]
- Third party:
 - <https://spark-packages.org>: Avro, Redshift, MongoDB...
 - Spark Cassandra Connector (DataStax github)

DataFrame = Dataset[Row]

```
val records: DataFrame = spark.read.json(RecordsUrl)
```

DataFrame Schema

```
scala> records.printSchema
root
|-- actor: struct (nullable = true)
|   |-- display_login: string (nullable = true)
|   |-- id: long (nullable = true)
...
|-- created_at: string (nullable = true)
|-- id: string (nullable = true)
|-- payload: struct (nullable = true)
|   |-- comment: struct (nullable = true)
|   |   |-- body: string (nullable = true)
...
|-- public: boolean (nullable = true)
|-- repo: struct (nullable = true)
|   |-- id: long (nullable = true)
|   |-- url: string (nullable = true)
|-- type: string (nullable = true)
```

GitHub Event Data

```
cd /datasets/github/data
wget http://data.gharchive.org/2019-04-28-0.json.gz
wget http://data.gharchive.org/2019-04-28-1.json.gz
wget http://data.gharchive.org/2019-04-28-13.json.gz
```

Preliminary Exploration

```
# creates 2019-04-28-0.json  
gunzip 2019-04-28-0.json.gz
```

```
# 95865  
wc -l 2019-04-28-0.json
```

Running spark-shell in cluster

```
spark-shell --master spark://192.168.1.232:7077 \
--driver-memory 1g \
--executor-memory 2g \
--total-executor-cores 4 \
--executor-cores 2 \
--jars /tmp/dataset-0.9.0-SNAPSHOT-fat.jar
```

Spark Shell Startup

```
ng bulletin-java classes where applicable
Setting default log level to "WARN".
To adjust logging level use sc.setLogLevel(newLevel). For
Spark context Web UI available at http://markus-desktop-u.
Spark context available as 'sc' (master = spark://192.168.0
Spark session available as 'spark'.
```

Welcome to

```
Using Scala version 2.11.12 (Java HotSpot(TM) 64-Bit Server
Type in expressions to have them evaluated.
Type :help for more information.
```

```
scala> :quit
```

Spark Standalone Cluster Manager - 1 running application

Spark Master at spark://192.168.1.230:7077

URL: spark://192.168.1.230:7077

Alive Workers: 1

Cores in use: 8 Total, 4 Used

Memory in use: 30.4 GB Total, 4.0 GB Used

Applications: 1 [Running](#), 0 [Completed](#)

spark-shell auto-imports

```
scala> :imports
1) import org.apache.spark.SparkContext._
2) import spark.implicits._
3) import spark.sql
4) import org.apache.spark.sql.functions._
```

Data Exploration - schema and counting

```
val RecordsUrl = "file:///datasets/github/data"
val records = spark.read.json(RecordsUrl)
records.printSchema
//...
// |-- repo: struct (nullable = true)
// |   |-- id: long (nullable = true)
// |   |-- name: string (nullable = true)
// |   |-- url: string (nullable = true)
// |   |-- type: string (nullable = true)

records.count()
//147,374
```

Spark Application UI - Jobs, stages, tasks

Spark shell application UI

Jobs Stages Storage Environment Executors SQL

Spark Jobs (?)

User: medale
Total Uptime: 2.5 min
Scheduling Mode: FIFO
Completed Jobs: 2

▶ Event Timeline

▼ Completed Jobs (2)

Job Id ▼	Description	Submitted	Duration	Stages: Succeeded/Total	Tasks (for all stages): Succeeded/Total
1	count at <console>:26 count at <console>:26	2019/05/02 10:01:16	0.6 s	2/2	4/4
0	json at <console>:25 json at <console>:25	2019/05/02 10:00:58	4 s	1/1	3/3

Spark Application UI - Stages

APACHE  2.4.0

▼ DAG Visualization

► Show Additional Metrics

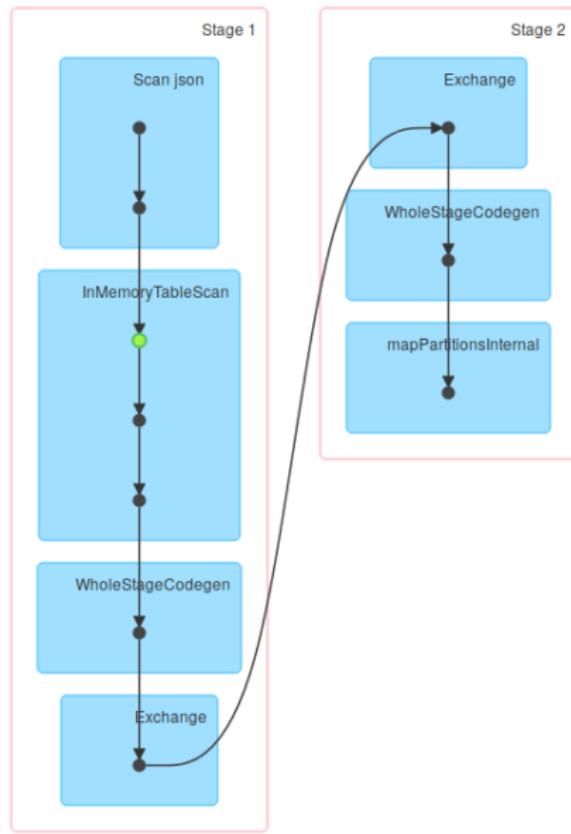

► Event Timeline

Summary Metrics for 3 Completed Tasks

Metric	Min	25th percentile	Median	75th percentile	Max
--------	-----	-----------------	--------	-----------------	-----

Job 1 - Stages 1 and 2 DAG

DAG Visualization

One Job = n lazy transformations, 1 action

```
//job0 (read twice - once for schema, once for count)
val records = spark.read.json(RecordsUrl)
//lazy transformation
records.cache()
//action 1 - end of job 1
records.count()
records.printSchema

//2 lazy transformations - immutable datasets
val types = records.select("type")
val distinctTypes = types.distinct()

//one eager action - job 2
distinctTypes.show()
+-----+
|      type |
+-----+
|      PushEvent |
...
|      PullRequestEvent |
+-----+
```

Spark Application UI - Storage (caching)

APACHE  2.4.0

Jobs Stages Storage Environment Executors SQL

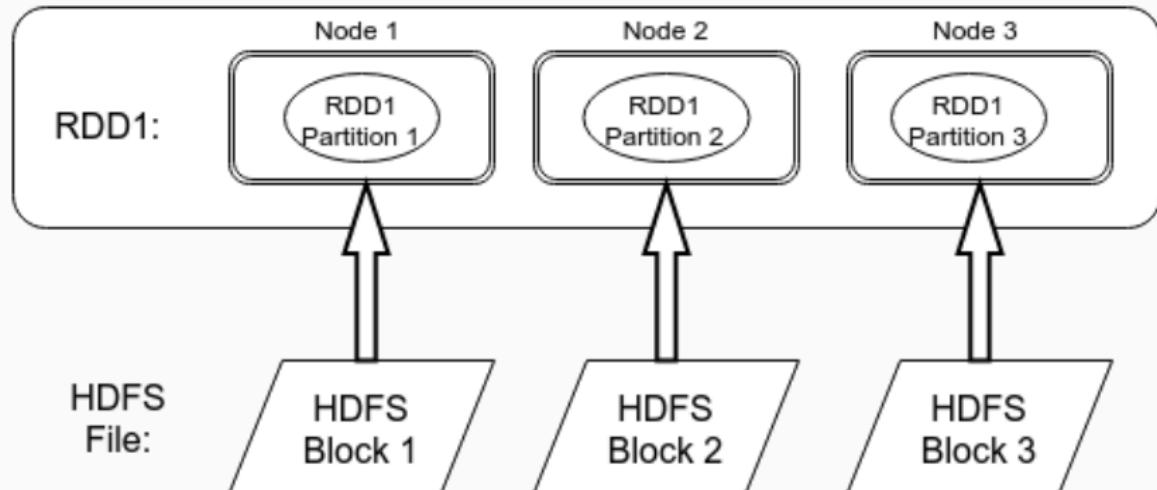

Spark shell application UI

Storage

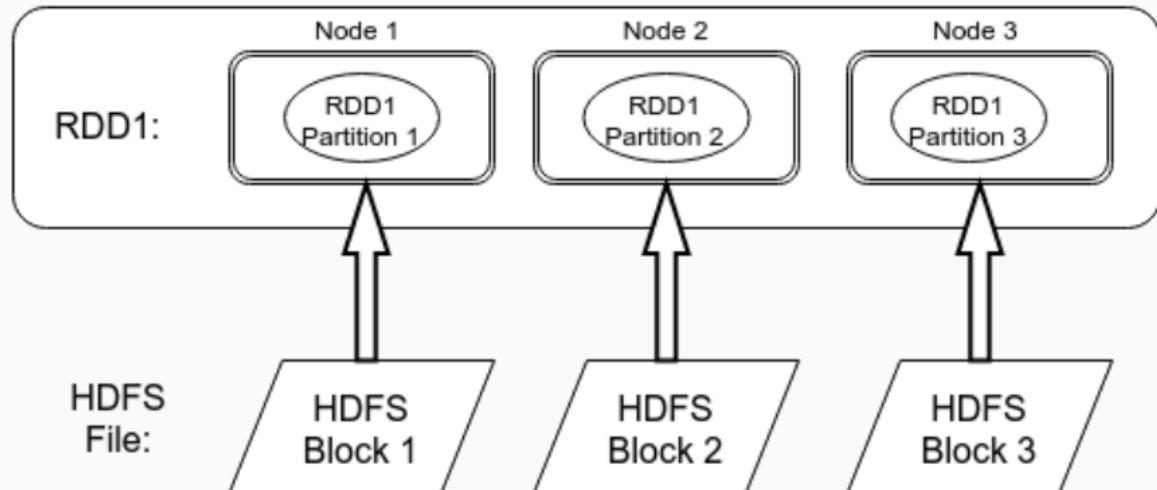

▼ RDDs

ID	RDD Name	Storage Level	Cached Partitions	Fraction Cached	Size in Memory	Size on Disk
11	FileScan json [actor#6,created_at#7,id#8,org#9,payload#10,public#11,repo#12,type#13] Batched: false, Format: JSON, Location: InMemoryFileIndex[file:/datasets/github/data], PartitionFilters: [], PushedFilters: [], ReadSchema: struct<actor:struct<avatar_url:string,display_login:string,gravatar_id:string,id:bigint,login:str...]	Memory Deserialized 1x Replicated	3	100%	312.1 MB	0.0 B

Input partitions - splittable file?

Resilient Distributed Datasets (RDDs)

RDDs - Not deprecated!

```
object RddProcessor {  
  
    val DefaultEventInputUrl = "file:///datasets/github/data"  
  
    def process(sc: SparkContext, inputUrl: String): (Long, Long) = {  
        val records: RDD[String] = sc.textFile(inputUrl)  
        println(s"We have a total of ${records.partitions.size} partitions.")  
        val total = records.count()  
        val prs = records.filter(r => r.contains("PullRequestEvent"))  
        val totalPrs = prs.count()  
        (total, totalPrs)  
    }  
  
    def main(args: Array[String]): Unit = {  
        val spark = SparkSession.builder().  
            appName(name = "RddProcessor").  
            getOrCreate()  
  
        val inputUrl = if (args.size > 0) {  
            args(0)  
        } else {  
            DefaultEventInputUrl  
        }  
        process(spark.sparkContext, inputUrl)  
        spark.stop()  
    }  
}
```

And now for something completely different: Colon Cancer

- Screening saves lives!
